## PROCESS CATALOGUE & EQUIPMENT

The competencies of the CNT division are focused on Next Generation Computing, devices for the Internet of Things and screening of processes and materials for 300 mm semiconductor manufacturing. More than 100 process and analytical tools for mainly 300 mm wafers are available. Due to a 4000 m<sup>2</sup> clean room as well as labs for analytics and electrical characterization compliant with state of the art industry standards, developments and new processes can be quickly integrated into the production lines of our partners.
